

# POTTED PINES

SUSTAINABLE CHRISTMAS TREES

## Watering

Your Christmas tree requires a water every 3 - 4 days.

Doing this will ensure that the trees produce their beautiful comforting scent, maintain good needle retention, and vibrant colour.

We recommend:

Mini tree	40ml (approx. 2 tbsp)
Medium tree	100ml (approx. 1/3 cup)
Large tree	250ml (approx. 1 cup)

## Branch Trimming

Our trees are shaped just prior to being delivered to you. We leave strong robust branches for your Christmas decorations to hang. Please do not trim branches or remove the branches as this can cause the tree stress and start to drop needles.

## Positioning

The tree should be placed in a location with sunlight for only a portion of the day; morning or afternoon, would be perfect. This allows the tree to showcase their stunning verdant colour without causing heat stress.

## COLLECTION

On December 28th place your tree on your porch, or the alternative location as previously agreed, and we will collect.

Please ensure that the saucer, hessian wrap and ribbon are with the tree for collection.

If you have an alternative collection date prearranged your tree will be collected on that date.

Thank you for supporting Potted and in your cooperation in making Christmas more sustainably and environmentally friendly.
